

New York ENERGY UPDATE

IMPORTANT NEWS FOR NEW YORK STATE HEAT CONSUMERS

Latest News in the Energy Industry

BetterwithBioheat.com is a resource for liquid heating fuel consumers in New York State use to stay informed about important energy information in our community. We invite you to use this newsletter and the website, BetterwithBioheat.com, to learn more about Bioheat® fuel benefits and trends in energy, alternative energy, how Bioheat® fuel is cleaner and greener than ever, tips on reducing your energy costs, and more.

As the percentage of biodiesel in Bioheat® fuel increases, greenhouse gas and carbon emissions decrease. By 2023 the goal is for all Bioheat® fuel used in New York to be Bioheat® Plus, which has 20% biodiesel. Many fuel providers in New York are already working towards increasing to B20 Bioheat® Plus in 2021.

The next milestone is 2030 when the industry aims to have all Bioheat® fuel to be 50% biodiesel, or B50 blend. 50% biodiesel blends will eliminate 500 million gallons of heating oil and provide a 40% reduction in greenhouse gas (GHG) emissions, thereby meeting the state's GHG reduction requirement under the Climate Leadership and Community Protection Act (CLCPA).

This clean energy revolution is doing wonderful things for our state and environment. Produced domestically, Bioheat® fuel helps to reduce our dependency on foreign oil, creates more domestic jobs, and helps to support local, family-run businesses. Eco-friendly Bioheat® fuel can be used seamlessly, with no expensive conversions, in place of standard #2 heating oil for residential and commercial heating.

Getting Bioheat® fuel delivered means improved system performance, which can extend its lifespan and even help reduce your annual fuel costs. But the benefits don't end there—the cleaner fuel reduces greenhouse gas emissions to protect our ecosystem and provide a more sustainable option over time. Bioheat® fuel is truly our only option as New York pushes toward more sustainable fuel sources.

WHAT'S INSIDE?

- How to know when to order fuel
- Check and regulate fuel levels
- Save money on fuel this year
- Resources about Bioheat® fuel
- 6 reasons to use Bioheat® fuel

Here's How to Know When to Order Bioheat® Fuel

If you're a Bioheat® fuel user, chances are that you have a metal fuel storage tank in your basement. You'll find that on the top or side of your heating fuel storage tank, there is a small circular sight glass with a floating bobber. This is called a tank gauge, and it can tell you how much fuel is remaining and indicate when you need to order a refill.

How Frequently to Check Your Gauge

This will be a little different for every homeowner, depending on the size of your tank and the efficiency of your HVAC systems. You should check your fuel storage tank gauge regularly. Don't forget to check it during the summer too, particularly if you use Bioheat® fuel to power year-round appliances like your water heater.

Check and Regulate Fuel Levels *Like a Pro*

Do you know how to check your fuel storage tank and determine when you need a fuel delivery? It's a simple task that you can easily monitor. Here's how to check your fuel tank levels:

- 1. Visit your fuel tank. Most tanks are located in the basement.**
- 2. Find the tank gauge and read the fuel level in your tank.**
- 3. Place your fuel order before the indicator reaches the ¼ mark.**

Prefer not to check your tank's fuel level? Contact us today to sign up for automatic delivery. This will take the stress off your shoulders when it comes to maintaining your fuel levels, heat, and hot water.

SAVE MONEY ON FUEL THIS YEAR

1 Sign up for Automatic Fuel Delivery

Running out of fuel can cause unnecessary safety risks. Automatic delivery customers have reduced risk of a no-fuel emergency and benefit from more efficient fill-ups and lower energy costs.

2 Book an Annual HVAC Tune-Up

Your furnace or boiler kept you warm all winter, and your air conditioner is about to keep you cool all summer. Scheduling an annual tune-up can reduce your energy bills by upwards of 10%.

3 Get a Programmable Thermostat

Switching to a programmable thermostat can help you save on your energy bills. Give your HVAC system a break when you're asleep or out of the house to conserve energy and save money.
